

Proof that the Big Bang is false and that all matter and time had a beginning, and that Go created all things. Thus, the “no God” assumption is again proven false. So, it is illogical, unscientific, and irrational to ever use it in origins or in the long dating of things.

The universe could not have come into being from nothing. That violates the 1st law of thermodynamics, conservation of energy. It also violates all other conservation laws of physics. It also violates the law of cause and effect, and reality. The universe could not have always existed. That violates the 2nd law of thermodynamics. It could not have always existed since the 2nd law of thermodynamics for an isolated, closed system means that entropy, that is disorder, would have always been increasing. If the universe always existed, all order would have vanished eons ago.

The universe obeys a set of physical laws. But these laws prove the existence of the Creator would made a universe to do so.

The universe is orderly in many ways, throughout time and space. But that again proves the existence of the Creator would made the universe that way.

The universe is extremely finely tuned. This fine tuning is what allows matter, living things, stars, galaxies, planets to exist. The orderly finely tuned universe is orderly and finely tuned across all space and time. This fine tuning also proves the existence of the Creator that made it that way.

All matter, even time itself must have had a beginning. This is true no matter how many variants the evolutionists conjure up, whether multiverses, extra dimensions, dark energy, dark matter, etc. This also proves the existence of God the Creator who created all things including time. This matches Genesis 1:1.

All physical things had a beginning even time itself

Graph any physical quantity of anything against time with time as the horizontal axis. That time axis is shown below.

-infinity <-- now --> +infinity (time)

Now look at the right time axis with the arrow pointing to positive infinity. It is infinitely far from now. We will never get there. Now look at the left time axis with the arrow pointing to negative infinity. It is infinitely far. We were never there. So, all physical things even time had a beginning. This is true whether evolutionists propose multiple universes, anti-universes, parallel universes, any number of dimensions, dark matter, dark energy, etc. The word of God declares this is its first verse.

In the beginning God created the heaven and the earth - Genesis 1:1

Btw, God is not a thing so the above does not apply to Almighty God who created all things.

Where did the extremely finely tuned orderly universe come from?

If the universe were not extremely finely tuned then no galaxies, no stars, no planets, no planet Earth, no atoms, no protons, no neutrons, no electrons, no light, no elements, no molecules, and certainly no living things would exist. Or some combination of these would not exist. And if it were not extremely orderly, then things that did exist would pop in and out of existence all the time. It would be utter total chaos everywhere. The universe is extremely finely tuned and extremely orderly throughout all space and for all time. If you divide all the universe into tiny cubes whose side is a Planck length and divide all the supposed 13.7 billions of years for the age of the universe into segments a Planck time, the time it takes for light to travel a Planck length, you get about 10^{250} space-time "points". Now the extreme fine tuning of the universe has odds against it coming into being by random chance far greater than a googolplex to 1. And that holds for all those space-time "points". So that raises the odds against the universe being extremely finely tuned and extremely orderly across all space and time far greater than a googolplex to the googol squared to 1.

But there is no expectation that any universe would even have the same laws as ours, both in number and kind. Nor is there any expectation that there would be the same laws or numbers of laws throughout different regions of the universe. This then makes the total possibilities infinite.

So, it is impossible for any universe to ever come into existence. And it would have taken an infinite number of these impossibilities to have occurred, for our particular universe to have come into existence. So, this proves an infinite number of times that our universe is impossible to have come into existence without God.

The following link shows 209 finely tuned parameters.

<https://robertcliftonrobinson.com/evidence-for-fine-tuning-of-the-universe/>

The following link calculates the odds against a finely tuned universe existing.

There are many other things which refute the Big Bang Theory. That is left for future posts.
